

AMENDMENTS TO THE CLAIMS:

Claim 1. (Currently amended) A data distribution satellite communication system comprising:

a communication satellite; and

a plurality of satellite communication terminals enabled ~~enable~~ to receive a signal from said communication satellite, said data distribution satellite communication system providing, from said communication satellite to said plurality of satellite communication terminals, with distribution business for a data signal in a broadcasting fashion, ~~said data distribution satellite communication system comprising:~~

a1 a satellite earth station ~~for carrying out a principal communication via said communication satellite;~~

a data distribution center, connected to said satellite earth station, ~~for distributing said data signal to said communication satellite;~~ and

return communicating means for enabling said data distribution ~~distributing~~ center to receive a data request signal from said satellite communication terminals,

said data request signal including a code indicative of an emergency level of data distribution, ~~whereby it is possible to flexibly distribute a lot of information in accordance with requests from a number of users at a low cost by the use of instantaneosness, a wide-area characteristic, and a broadcasting characteristic of satellite communications.~~

Claim 2. (Currently amended) ~~A~~ The data distribution satellite communication system as

claimed in claim 1, wherein said data ~~date~~ request signal ~~has~~ comprises, as said emergency level of said data distribution, a class indicative of one of instant, within ten minutes, within thirty minutes, within one hour, within six hours, within one day, within one week, and a periodic distribution, ~~and so on~~.

91 Claim 3. (Currently amended) ~~A~~ The data distribution satellite communication system as claimed in claim 1, wherein said ~~data distribution satellite communication system comprises, as said return communicating means, ground communicating means using~~ comprises a ground communication network for each of the satellite communication terminals having no transmitting function to said communication satellite.

Claim 4. (Currently amended) ~~A~~ The data distribution satellite communication system as claimed in claim 1, wherein said satellite earth station comprises;

~~, for providing said return communicating means to each of the satellite communication terminals having a transmitting function to said communication satellite, satellite communicating means for receiving, as a received signal, the data request signal from said satellite communication terminal communicated via said communication satellite; and~~
means for transferring said received signal to said data distribution center.

Claim 5. (Currently amended) ~~A~~ The data distribution satellite communication system as claimed in claim 2, wherein, when said emergency level of said data distribution indicates the

instant, said data distribution center comprises ~~comprising~~ instant data distributing means for transmitting, via said satellite earth station and said communication satellite, a data signal requested by said data request signal by preparing to a signal format including an address of a request source as soon as possible.

Claim 6. (Currently amended) A The data distribution satellite communication system as claimed in claim 2, wherein, when said emergency level of said data distribution of said satellite communication terminal serving as a request source indicates no instant or the periodic distribution,

a) said data distribution center comprises ~~comprising~~ means for preparing a reservation signal including a distribution time instant as well as a reservation number to transmit said reservation signal to said request source via said satellite earth station and said communication satellite, and

the satellite communication terminal of said request source comprises ~~comprising~~ means for receiving distribution data including said reservation number as an address at said distribution time instant.

Claim 7. (Currently amended) A The data distribution satellite communication system as claimed in claim 1, wherein said data distribution center comprises an electronic library means for storing a broad range of information for meeting a demand in users of said satellite communication terminals in an electronic form, said electronic library means establishing a home

page indicative of the broad range of information on the Internet to submit retrieval of said users, said electronic library means distributing information requested in accordance with a data request of said users.

Claim 8. (Currently amended) A satellite communication educational institution comprising:

a communication satellite;

a plurality of satellite communication terminals each enabled ~~enabling~~ to receive a signal from said communication satellite;

a satellite earth station for carrying out a principal communication via said communication satellite; and

a data distribution center connected to said satellite earth station by a communication channel, wherein:

said data distribution center comprises ~~comprising~~ an electronic library ~~for~~ storing collected information in an electronic form, said electronic library presenting stored contents to users of said satellite communication terminals ~~to submit retrieval of said users~~, said electronic library supplying information requested in accordance with a data request signal from said users, and

said data request signal comprises ~~including~~ a code indicative of an emergency level of data distribution.

Claim 9. (Currently amended) ~~A~~ The satellite communication educational institution as claimed in claim 8, ~~wherein~~ further comprising ~~comprises~~ a ground communication network for connecting said data distribution center and said plurality of satellite communication terminals.

Claim 10. (Currently amended) ~~A~~ The satellite communication educational institution as claimed in claim 8, ~~wherein~~ further comprising ~~comprises~~ a data communication network for connecting said data distribution center and a database for information collection.

41 Claim 11. (Currently amended) A method of distributing data in accordance with requests from a plurality of users, said method comprising ~~the steps of~~:

storing information in an electronic form to publish a list of its contents on a home page of a data distribution center;

connecting each of said users with the home page of said data distribution center to retrieve available information;

transmitting, from ~~in~~ said users, a data request signal to said data distribution center if there is information desired on the basis of a result of retrieval, said data request signal designating an allowable waiting time interval until data is distributed; and

distributing, from ~~in~~ said data distribution center, data requested by said data request signal, to said plurality of users via a communication satellite within said allowable waiting time interval designated by said data request signal.

Claim 12. (Currently amended) ~~★~~ The method as claimed in claimed 11, wherein ~~said allowable waiting time interval includes instant~~, when said allowable waiting time interval designated by said data request signal is instant, said distributing step comprises ~~comprising a step of~~ distributing, from ~~in~~ said data distribution center, data requested by said data request signal via said communication satellite as soon as possible.

Claim 13. (Currently amended) ~~★~~ The method as claimed in claimed 11, wherein ~~said allowable waiting time interval includes instant and other time intervals other than the instant~~, when said allowable waiting time interval designated by said data request signal is not instant, said distributing comprises ~~step comprising the sub-steps of:~~

Al
returning, from ~~in~~ said data ~~data~~ distribution center, a reservation signal to subscriber's terminals for said users via said communication satellite, said reservation signal including a request source's ID, a group address, and a distribution scheduled time instant;

setting up, in said subscriber's terminals receiving said reservation signal, the group address and the distribution scheduled time instant assigned to its own satellite reception equipment to put said subscriber's terminals receiving said reservation signal into a reception waiting state;

returning, from ~~in~~ said users, a reservation confirmation signal to said data distribution center;

distributing, from ~~in~~ said data distribution center receiving said reservation confirmation signal, a decipher key distribution signal to said users, said decipher key distribution signal including the request source's ID, the group address, and a data decipher key; and

broadcasting, from ~~in~~ said data distribution center, data with said group address via said communication satellite at said distribution scheduled time instant.

Claim 14. (Currently amended) ~~A~~ The method as claimed in claimed 13, ~~wherein~~ further comprising ~~comprises the steps of:~~

receiving, in each of said subscriber's terminals, data including the group address assigned to its own station as received data at a time instant designated;

deciphering, in each of said subscriber's terminals, said received data using said data decipher key to produce deciphered data; and

storing, in each of said subscriber's terminals, said deciphered data in a memory thereof.

Claim 15. (Currently amended) ~~A~~ The method as claimed in claimed 14, wherein ~~said step~~ for returning said reservation signal ~~comprises the sub-steps of:~~

when said allowable waiting time interval designated by said data request signal is within a predetermined time interval, checking, in said data ~~date~~ distribution center, whether or not a reservation for the same data is already present;

when said reservation is absent, reserving, in said data distribution center, distribution for said data in question after said predetermined time interval is elapsed, and preparing said reservation signal by selecting a new group address to return said ~~aid~~ reservation signal to said users via said communication satellite; and

when said reservation is already present, returning, in from said data distribution center,

said reservation signal including its scheduled time instant and the group address to said users via said communication satellite.

Claim 16. (Currently amended) A data distribution system comprising:

a communication satellite;

a plurality of satellite communication terminals enabled ~~for enabling~~ to receive a signal from said communication satellite;

a satellite earth station for carrying out a principal communication via said communication satellite;

ai a data distribution center connected to said satellite earth station by a communication channel; and

a data communication network for connecting said data distribution center and a database for information collection; wherein:

said data distribution center comprises ~~comprising~~ an electronic library for storing collected information in an electronic form, said electronic library presenting stored contents to users of said satellite communication terminals to submit retrieval of said users, said electronic library supplying information requested in accordance with a data request signal from said users,

each satellite communication terminal comprises ~~including~~ means for transmitting a data request signal with a time limit to said data distribution center, and

said data ~~date~~ distribution center further comprises ~~comprising~~ means for distributing, in response to the data ~~date~~ request signal from each satellite communication terminal, desired data

to said satellite communication terminals via said satellite earth station and said communication satellite within the time limit designated.

Claim 17. (Currently amended) ~~A~~ The ~~data~~ date distribution system as claimed in claim 16, ~~wherein~~ further comprising ~~comprises~~ a ground communication network for connecting said data distribution center with each satellite communication terminal.

Claim 18. (Currently amended) ~~A~~ The data ~~date~~ distribution system as claimed in claim 16, wherein said data communication network comprises ~~is~~ the Internet.

ai
Claim 19. (Currently amended) A data distribution method in a data ~~date~~ distribution system comprising:

a communication satellite;

a plurality of satellite communication terminals enabled ~~for enabling~~ to receive a signal from said communication satellite;

a satellite earth station for carrying out a principal communication via said communication satellite;

a data distribution center for connecting said satellite earth station by a communication channel; and

a data ~~date~~ communication network for connecting said data distribution center and a database for information collection, wherein

said data distribution center comprises ~~comprising~~ an electronic library for storing collected information in an electronic form, said electronic library presenting stored contents to users of said satellite communication terminals ~~to submit retrieval of said users~~, said electronic library supplying information requested in accordance with a data request signal from said users,

said data distribution method comprising ~~the steps of~~:

transmitting, from ~~in~~ each satellite communication terminal, a data request signal with a time limit to said data distribution center; and

61 distributing, from ~~in~~ said data distribution center, in response to the data request signal from each satellite communication terminal, desired data to the plurality of satellite communication terminals via said satellite earth station and said communication satellite within the time limit designated.

Claim 20. (New) The method of claim 11, wherein, when said allowable waiting time interval is not instant, said distributing comprises:

returning a reservation signal from said data distribution center to said subscriber's terminals for said users via said communication satellite, wherein said reservation signal includes a request source's ID, a group address, and a distribution scheduled time instant.

Claim 21. (New) The method of claim 20, wherein said distributing further comprises:

setting up the group address and the distribution scheduled time instant assigned to the satellite reception equipment of said subscriber's terminals receiving said reservation signal to

put said subscriber's terminals receiving said reservation signal into a reception waiting state.

Claim 22. (New) The method of claim 20, wherein said distributing further comprises:

returning a reservation confirmation signal from said users to said data distribution center.

Claim 23. (New) The method of claim 22, wherein said distributing further comprises:

distributing a decipher key distribution signal from said data distribution center receiving said reservation confirmation signal to said users.

Claim 24. (New) The method of claim 23, wherein said decipher key distribution signal comprises the request source's ID, the group address, and a data decipher key.

Claim 25. (New) The method of claim 20, wherein said distributing further comprises:

broadcasting data with said group address from said data distribution center via said communication satellite at said distribution scheduled time instant.

Claim 26. (New) The institution of claim 8, wherein said data request signal comprises, as said emergency level of said data distribution, one of instant, within ten minutes, within thirty minutes, within one hour, within six hours, within one day, within one week, and a periodic distribution.

Claim 27. (New) The method of claim 11, wherein said data request signal comprises, as said allowable waiting time interval, one of instant, within ten minutes, within thirty minutes, within one hour, within six hours, within one day, within one week, and a periodic distribution.

Claim 28. (New) The system of claim 16, wherein said data request signal comprises, as said designated time limit, one of instant, within ten minutes, within thirty minutes, within one hour, within six hours, within one day, within one week, and a periodic distribution.

61 Claim 29. (New) The method of claim 19, wherein said data request signal comprises, as said designated time limit, one of instant, within ten minutes, within thirty minutes, within one hour, within six hours, within one day, within one week, and a periodic distribution.
